

fetchTodos, fetchTodosRequest,
 fetchTodosSuccess, fetchTodosFailure,
 addTodo, addTodoSuccess, toggleTodo,
 toggleTodoSuccess.

fetchTodos Request

fetchTodos → setLoading → setTodos
 toggleFetching

addTodo → setAddTodo

toggleTodo → setToggleTodo

const action = {

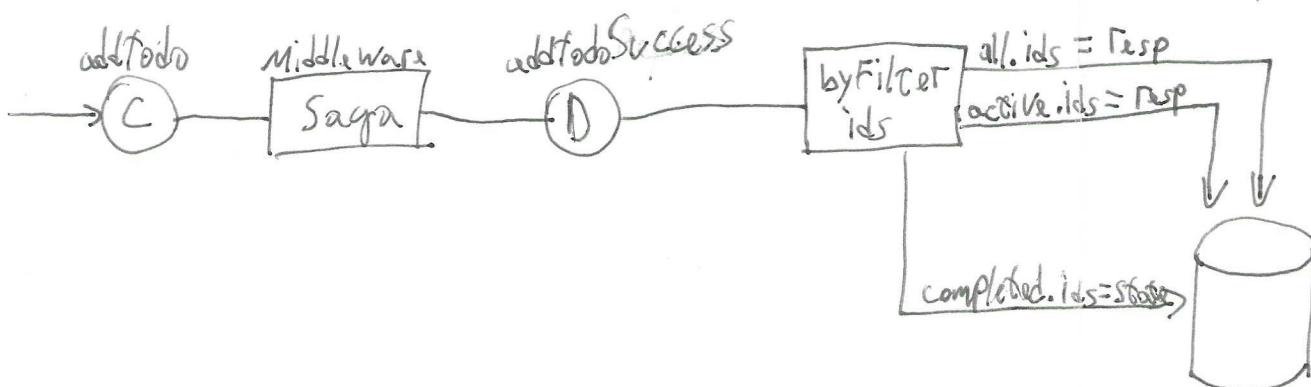

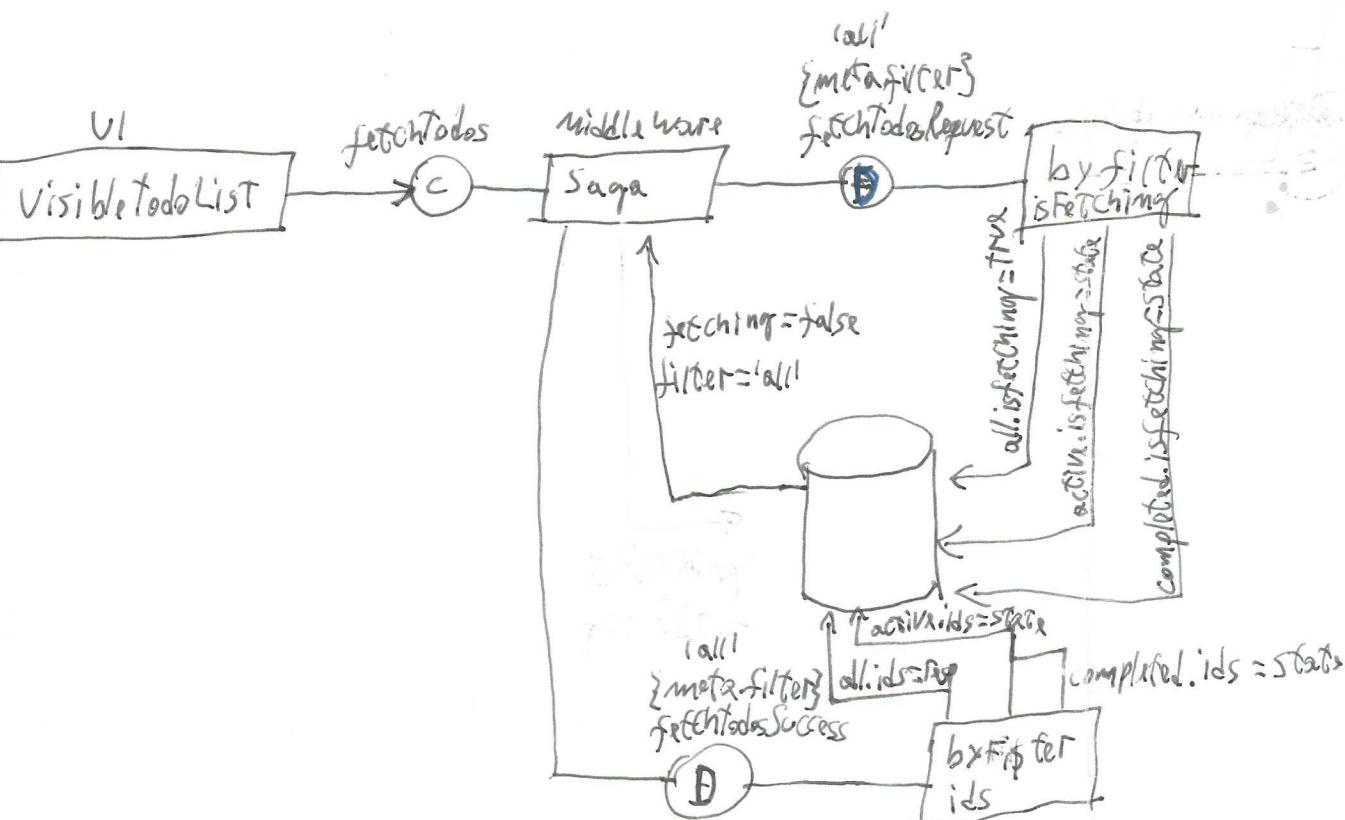

type: 'setTodos',

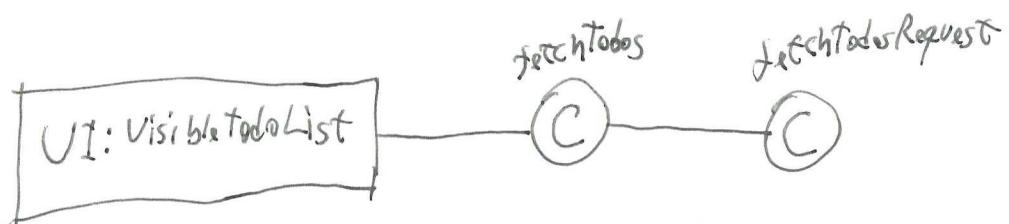

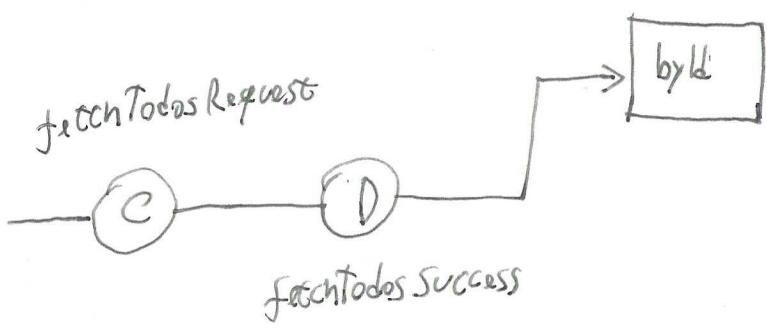

error: true,

payload: new Error('Booom!')

}

If the action were in the error state,
 the payload would hold the error itself,
 be it an Error object.

Redux Patterns
